

Muhammad Auzair

BLOCKCHAIN DEVELOPER

Islamabad, Pakistan | +92 303 5622496 | muhammad.auzair3@gmail.com

GitHub: [Nobody12here](#) | LinkedIn: [auzair-raja1](#)

Objective

Innovative Blockchain Developer with 2 years of experience designing and deploying smart contracts, DeFi protocols, and Web3-integrated backends. I specialize in Solidity, EVM-based development, and Django-powered APIs, bringing together blockchain performance, scalability, and user accessibility. Passionate about building robust decentralized systems, cross-chain integrations, and high-impact financial primitives that push the boundaries of Web3.

Experience

Fiverr | Blockchain Developer

2023-Present

- Designed and implemented smart contracts in Solidity for DeFi and NFT projects.
- Developed gas-optimized and secure smart contract architectures using Hardhat and Truffle.
- Integrated frontend DApps with blockchain using Ethers.js, Wagmi, and Viem.
- Built account abstraction-based wallets and handled tokenomics configurations for multiple clients.
- Delivered end-to-end blockchain integrations—from smart contract deployment to frontend wallet connection.

Baboons Netherland (Remote) | Internee Developer (Backend and blockchain)

2024-Present

- Built and deployed Web3 backends using Django to connect blockchain logic with user-facing systems.
- Deployed Solidity smart contracts and conducted manual QA testing for DeFi modules.
- Collaborated with frontend teams to ensure seamless Django–Web3.js integration.
- Gained hands-on experience with cross-chain architecture and on-chain/off-chain data synchronization.

CUST | Django Backend Developer

2025-Present

- Developed secure REST APIs for automated student services with PDF generation and role-based access.
- Designed scalable backend workflows integrating with frontend components.
- Applied clean code principles and contributed to maintainable, modular architecture

Education

Capital University of Science and Technology (CUST), Islamabad Pakistan

2025

BS Software Engineering

Skills & abilities

Blockchain & Web3: Solidity, Ethers.js, Web3.js, Wagmi, Viem, Smart Contract Testing,
Backend Development: Python, Django, Django REST Framework, RESTful APIs, GraphQL (basic)
Databases: PostgreSQL, MySQL, MongoDB
Testing & Tools: Hardhat, Foundry, OpenZeppelin, Docker, Git, GitHub Actions, Unit Testing
Frontend Integration: ReactJS, Wallet Connect, Next.js (basic)
Cloud & CI/CD: AWS (EC2), Azure (basic), GitHub CI/CD
Other: Object-Oriented Programming, Clean Architecture, Security Best Practices

Projects

[DIORA Wallet](#)

- Built multi-chain Web3 wallet supporting Ethereum, BSC, and Polygon with real-time portfolio tracking
- Integrated Privy authentication and WalletConnect v2 for secure wallet management and dApp connectivity
- Developed NFT gallery with blockchain data fetching and custom import functionality
- Implemented token transfer system with automated fee calculations and gas estimation using Wagmi
- Created real-time cryptocurrency price tracking using CoinGecko API and WebSocket connections
- Integrated LiFi Protocol for cross-chain token swaps and DeFi bridge functionality
- Built responsive React/TypeScript interface with transaction history and wallet customization features

[DiamondToken \(BEP-20\)](#)

- Developed a BEP-20 token with automated fee collection and redistribution logic on BSC network.
- Implemented liquidity and marketing fee mechanisms with anti-whale protection and reflection features.
- Deployed, verified, and tested the token using Hardhat and OpenZeppelin libraries.
- Integrated burn and liquidity management logic to ensure long-term token sustainability.

[DCNFT\(ERC-721, Dynamic Metadata\)](#)

- Created an ERC-721 NFT collection with dynamic metadata that updates based on user interactions and rarity levels.
- Implemented metadata URI switching using event-driven logic and Chainlink oracles.
- Integrated IPFS and Pinata for decentralized metadata storage.
- Used Hardhat for deployment, OpenZeppelin for contract security, and tested with Foundry.

DeFi Investment Tracker (Django, React, Solidity)

- Developed a crypto investment tracking platform integrating DeFi token price updates via CMC APIs.
- Built backend logic for investments, liquidations, and payouts with automated profit/loss tracking.
- Integrated blockchain wallet functionality with user authentication and transaction monitoring.
- Deployed and tested on AWS EC2 with secure APIs and responsive frontend design.

[LayerX \(Django, React, Solidity\)](#)

- Web3 DeFi platform enabling users to create, trade, and manage meme tokens (xPump) with integrated UniswapV2 router functionality for decentralized token swaps
- NFT marketplace and minting platform that converts X/Twitter posts into collectible NFTs with support for competitions and secondary trading
- IXO (Initial X Offers) fundraising launchpad for token presales with vesting schedules, claim mechanisms, and portfolio tracking for investors
- Gaming ecosystem (xPlay) featuring Unity-based games with NFT character integration, leaderboards, and competitive tournaments
- Multi-chain Web3 application built with React, TypeScript, Vite, wagmi, and Web3Modal supporting wallet connections and on-chain transactions
- Comprehensive user platform with KYC integration (Blockpass), referral system, profile management, and Redux-powered state management
